

Autoship (Add/Update)

An *Autoship* consists of predefined orders sent to a *Distributor* on a regular basis. The *Autoship (Add/Update)* Task is used to create and maintain one of two types of templates: 1) *Autoship Template*, or 2) *Business Protect Template*. The procedure used to create these two templates is identical except for the order generation process. All active *Autoship Orders* are converted into an order and move through the order process. *Active Business Protect Orders* are only created if a distributor's personal *Qualifying Volume* for his/her rank has not been met during the current period.

Autoship (Add/Update)... (as2300fm) Database: * Release 3.2.2 * - sample

1 → [Add Record] 2 → Distributor ID: 12055

3 → Autoship Status: Autoship Name: Hepper, Greg (Native) AR Balance: 1.92

4 → Autoship Type: Wholesale Spouse: Hepper, Poopsie (Native)

5 → Ship-to Information: Description: 01 Vacation (AB) Country: USA - United States

6 → Order Information: Entry Date: 2003/05/02 Entry Time: 13:12 Entry Initials: JJG

7 → Start Date: 2003/05/02 End Date: 2013/05/02

8 → Batch / Frequency: 10 1

9 → Price Level: 4 - Autoship (WHOLESALE)

10 → Warehouse: 2 - AW

Rank: 7 SLD Address: 2507 Cobb Dr Greenfield, OH 45123 Home Phone: (937) 555-3421

Status: D

Name: Hepper, Greg Spouse: Address: 3721 Miracle Coast Parkway Address 2: Address 3: Fort Walton Beach, FL 32547 Geo Code: 12091244758

Phone Number: (850) 621-5784 E-mail Address: jamesg@infotraxsys.com

Last Run Date: 2004/07/16 Last Order #: 4187 Last Run Period: 5/2002

Currency: USD - US Dollar

Figure 5.8: Autoship (Add/Update) - Order Info Tab (as2300fm)

- 1 You click *Add Record* from the toolbar to create a new template.
- 2 You enter the *Distributor ID* or press [Enter] to display the *Distributor Lookup* Window to select a distributor. (See *Chapter 3, Distributor Inquiry, Distributor Lookup*.)

Figure 5.14: *Generate Autoship Orders by Next Run Date (as3512up) - Range Verification*

You click *Yes* after you confirm that the correct *Commission Period* and *Run Date* have been selected. DataTrax BackOffice automatically creates a report listing which distributors received *Autoship* orders. It also shows those *Autoship Templates*, which were selected but had problems; therefore, an order could not be generated.

The report contains notations and comments indicating whether there were problems or not. For instance, you will see a notation stating, "Value before recalc=," which informs the reader of the before and after value resulting from the Autoship calculation.

Generate Business Protect Orders

The process to *Generate Business Protect Orders* is the same as that of generating *Autoship Orders by Batch Number*. Follow the instructions for Figures 5.11 and 5.12.

The rules DataTrax BackOffice uses to determine whether to generate an order are:

- 1) The record must be an active *Business Protect* (*Status 3*).
- 2) The current system *Date* must be between the record's *Beginning* and *Ending Dates*.
- 3) The record's *Last Run Period* must be less than the *Entered Commission Period*.
- 4) The distributor's *Personal Volume* (PV) must be less than that set in the *Business Protect Qualification Settings*.

A template must pass all the rules in order to generate an order.

Generate Autoship Orders by Next Run Date

The criteria DataTrax BackOffice uses to determine when to generate an order are:

- 1) The *Autoship* Record must be active (*Status 1*).
- 2) The current system *Date* must be between the *Record's Beginning* and *Ending Dates*.

Without passing these tests, a template will not have an order created.

Autoship Generation

Commission Period: 7/2002

Order Date: 2006/01/28

Batch Number: 0

Maximum Number of Orders: 2 (0 = Generate All)

Beginning: 0 Ending: 0

OK Cancel

Figure 5.13: Generate by Next Run Date (as3512up - Selection Criteria

- 1 You enter the appropriate *Commission Period*. The *Commission Period* must be active, i.e., in the range of the *Beginning* and *Ending Periods*.
- 2 You enter the *Order Date*.
- 3 You enter the *Next Run Date*.

Only templates meeting the above criteria and whose next Run Date is the same or older than the entered Next Run Date will be selected.

You click the OK Button to continue.

When you click the Button, a popup window is displayed.

- 1 You enter the appropriate *Commission Period*. The *Commission Period* entered must be active, i.e., in the range of the *Beginning* and *Ending Periods*.
- 2 You enter the *Order Date*.
- 3 You enter a *Beginning* and *Ending Batch* range. Only templates meeting the criteria above and whose *Batch Numbers* fall in the range specified in Figure 5.11 will be selected.
- 4 You enter the *Maximum Number of Orders* to generate.

A value of 1 in the Maximum Number of Orders field indicates no limitation on the number of orders generated. DataTrax BackOffice will generate orders until all the selected templates have been processed.

You click the *OK* Button to continue.

When you click the Button, a pop up window is displayed, asking you to confirm the *Autoships* information.

Figure 5.12: Generate Autoship Orders (as3512up) - Range Verification

You click *Yes* after you verify that the correct *Commission Period* and *Batch Range* have been selected. DataTrax BackOffice automatically creates a report listing which distributors received Autoship orders. It also shows those *Autoship Templates* that were selected but had problems, therefore, an order could not be generated.

The report contains notations and comments indicating whether there were problems or not. For instance, you will see a notation stating, "Value before recalc=", that informs the reader of the before and after values resulting from the Autoship calculation.

Deleting an Autoship or Business Protect

- 1) Display the Autoship (Add/Update) Window.
- 2) Type the autoship number.
- 3) Press [Enter] to display the autoship.
- 4) Click the Delete button.
- 5) Click the Yes button when prompted, "Do you want to delete this transaction?"

Unlike an order, an autoship can be undeleted. Simply enter the new status and save the record.

Batch Autoship Update

The *Batch Autoship Update* Task allows a user to update *Autoship Templates* without generating orders. This is useful when your company has made changes to item's *Prices* and/or *Volume* and you want those changes reflected immediately in the *Autoship Templates*. It also changes a template's *Status* to *Inactive* if its *End Date* is in the past. This Task only recalculates active templates, meaning it only processes those templates whose start date is in the past and *End Date* is in the future.

Generate Autoship Orders

The *Generate Autoship Orders* Task allows a user to generate orders from *Autoship Templates*. DataTrax BackOffice supports two methods of generating *Autoship* orders: 1) *Batch Number*, or 2) *Next Run Date*. The method used is specified in the *Order Entry Settings*.

Generate Autoship Orders by Batch Number

The screenshot shows the 'Autoship Generation' dialog box. It contains the following fields and controls:

- Commission Period:** A date field showing '7/2002', with callout 1 pointing to it.
- Order Date:** A date field showing '2006/01/19', with callout 2 pointing to it.
- Beginning/Ending:** Two date fields, both showing '0'. Callout 3 points to the 'Ending' field.
- Batch Number:** A text field showing '0'.
- Maximum Number of Orders:** A text field showing '2', with callout 4 pointing to it. To the right of this field is the text '(0 = Generate All)'.
- Buttons:** 'OK' and 'Cancel' buttons at the bottom.

Figure 5.11: Generate Autoship Orders by Batch Number (as3512up) - Selection Criteria

The criteria DataTrax BackOffice uses to determine when to generate an order are:

- 1) The *Autoship* Record must be active (*Status 1*).
- 2) The current system *Date* must be between the *Record's Start* and *End Dates*.
- 3) The *Record's Last Run Period* must be less than the entered *Commission Period*.

Without passing these tests, a template will not have an order created.

Totals Tab

The *Totals* Tab allows you to select or enter information that affects the *Order Total*, as well as the *Payment Type(s)* used. Entering information on the *Totals* Tab of an *Autoship Template* is the same as entering information on the *Totals* Tab of an order. (See *Chapter 5, Order Entry, Totals Tab*.)

The screenshot shows the 'Autoship (Add/Update)... (as2300fm) Database: * Release 3.2.2 * - sample' window. The 'Totals' tab is selected, indicated by a red box and a circled '1'. The window contains several sections: 'Order Info' with fields for Autoship Num (234), Distributor ID (12055), Autoship Status (1 - Autoship), and Autoship Type (Wholesale); 'Items' with a list of items (Sales, Discount, Shipping, Misc, Sales Tax, Order Total, Balance, Qualifying Volume, Retail Total); 'Payments' with a 'Type' drop-down box (0 - None) and an 'Amount' field (0.00), highlighted by a blue box and a circled '2'; and a 'Comments' text area. The 'AR Balance' is shown as 1.32 in a red box.

Figure 5.10: Autoship (Add/Update) - Totals Tab (as2300fm)

1

You click the *Totals* Tab.

2

After reviewing the template, you click the *Type* drop-down box in the *Payments* Section and select the *Payment Type*.

You click *Save* to store the template.

Items Tab

Autoship (Add/Update)... (as2300fm) Database: * Release 3.2.2 * - sample

Autoship Num: 234 Distributor ID: 12055

Autoship Status: 1 - Autoship Name: Hepper, Greg (Native) AR Balance: 1.92

Autoship Type: Wholesale Spouse: Hepper, Poopsie (Native)

Order Info Items Totals Update Log

Ln	Item Code	Product Description	Quantity		Sales Amount		Amount	Extended
			Ord	Shp B/O	Price	Extended		
1*	555	Nutritional Bar - Cherry	2	0	0.90	1.80	1.00	2.00

Line Number: 2 Press <F6> to delete an item. Totals: 1.80 2.00

Item Code: Quantity: 0

Price Level: 2. Qualifying

Item Name: 4. Commission

Item Name 2:

Sales Price: 2. Qualifying 3. Taxable

0.00 0.00 0.00

Total Taxable: 4.65

2. Qualifying: 2.00

4. Commission: 2.00

Figure 5.9: Autoship (Add/Update) - Items Tab (as2300fm)

- 1 You click the *Items Tab* to add *Products* or *Services* to the order. Information about the *Item Code*, such as *Quantity Ordered*, *Backordered*, *Shipped*, *Pricing* and *Volume* is displayed.
- 2 You type the *Item Code* of the *Product* or *Service*. To display a list of *Item Codes* and their *Descriptions*, clear the *Item Code* Box and press [Enter]. The *Item Lookup* Window is displayed. Use the down arrow key on your keyboard to highlight the desired *Item* and press [Enter], or double-click the *Item Code* to select it. You type the *Quantity Ordered* and press [Enter].
- 3 You press [Enter] to accept the displayed *Price Level*, or select another option from the drop-down box. You may repeat this process for other individual *Item Codes*.
- 4 The specific *Item Code* info is displayed in the table.

- 3 You select the *Autoship Status*.
- 4 You select the *Autoship Type* from the drop-down box. You may choose from either *Wholesale* or *Retail*.
- 5 You select a *Ship-to Address*.
- 6 You enter the *Autoship Date*. It defaults to the current *Date*.
- 7 You enter a *Start* and *End Date*. The *End Date* will default to 10 years from the *Start Date*. The *Start Date* defaults to the current *Date*.
- 8 You enter an *Autoship Batch Number* and the *Frequency*. The *Frequency* tells DataTrax BackOffice how many periods to allow between each time the template can be generated into an order. For example, 2 would mean to generate every other period.

Autoship Statuses

The Autoship statuses are:

- 1 Autoship
- 2 Inactive Autoship
- 3 Business Protect
- 4 Inactive Business Protect
- 5 Subscription Billing
- 6 Inactive Subscription Billing
- 9 Deleted

If the generation method specified in the order Entry Settings is Next Run Date, then instead of entering a Batch Number, you enter how often to generate the Autoship Template, i.e., 14 for every 14 days.

For Autoship, you may want to set the Batch Number to be the same as the day of the month. This makes it easy to remember which orders to generate for the day. It also has the benefit of allocating the number of shipments the Inventory Department will have to process at one time.

- 9 You enter the *Price Level*.
- 10 You enter the *Ship Warehouse*.
