

Payment Type: Check

If *Check* were selected as the *Payment Type*, the system displays the check information window. Enter the requested information from the distributor's check.

Be aware that there may be a discrepancy between the check amount and the invoice balance, because customers and distributors neglect to factor in freight charges and/or sales taxes, etc.

allowance, which, lets say for this example, is 10% of the total, then the order can be released without a manager's approval. Anything over the 10% cannot be released without the manager seeing the order and approving it. Your company determines the limit or allowance. You may want to make it at least a 10% allowance, so the manager does not have to run around and release orders all day.

Type in the password and press [ENTER].

The system validates that the order has been added and asks “***Do you want to add another?***”. Click *YES* or *NO* and complete the transaction.

Autoship (Add/Update)

To run, click the *Tasks* menu, and then click the *Autoship/Bonus Protect* sub-menu, and click *Autoship (Add/Update)*.

The *Autoship (Add/Update)* window is used to create one of two types of templates: an *Autoship Template*, or a *Bonus Protect Template*. Creating an *Autoship* or *Bonus Protect* template is identical. The difference is seen during the order generation process. All active *Autoship Orders* are converted into an order and move through the order process. *Active Bonus Protect Orders* are only created if a distributor's personal qualifying volume for his rank has not been met during the current period.

Currency: USD - US Dollar

Figure 4.6: Autoship Add/Update (as2300fm) – Order Info Tab.

- 1 Refer to figure 4.6. Click the *Add* button from the tool bar to create a new template record.
- 2 Enter the *Distributor ID*, or press the [ENTER] key to bring up the distributor lookup window to select a distributor.
- 3 Enter the *Autoship Status*. Choose from either 1 - *Autoship* or 3 - *Bonus Protect*.

Deleting an Order

1. Be in the *Orders Department*.
2. Type the *Order Number*.
3. Press [ENTER] to display the order.
4. Click the *Delete* button.
5. Click the Yes button when prompted, "Do you want to delete this record?"

Be aware that once an order has been deleted, it cannot be undeleted. The order status actually changes to a status "9", meaning the order was deleted.

Also available are status 2 - Inactive AS, and 4 - Inactive BP.

Select the *Autoship Type* from the dropdown box. You may choose from either *Wholesale* or *Retail*.

Select a *Ship-To Address*.

Enter the *Autoship Date*. It defaults to the current date.

Enter a *Start* and *End Date*.

The End Date will default to 10 years from the Start Date. The Start Date defaults to the current date.

Enter an *Autoship Batch* number.

For autoship, you may want to set the batch number to be the same as the day of the month. This makes it easy to remember which orders to generate for the day. It also has the benefit of allocating the number of shipments the inventory department will have to process at one time.

For bonus protect, select the same batch number for all Bonus Protect Orders. Bonus Protect should only be run at the end of the month.

Enter the *Next Run Date*. The date will default to the autoship date, plus the autoship batch number. For instance, if the autoship date is 2002/08/23 and the

batch number is 6, then the next date will default to 2002/08/29.

! *You cannot change the batch number and have InfoTrax BackOffice automatically update the next run date. It only calculates the next run date the first time, after that the next run date must be manually updated.*

10 Enter the *Price Level*.

11 Enter the *Ship Warehouse*.

 - 2 After reviewing the template, click the *Payment Type* dropdown box and select the payment type.
-  *The recommended payment types for an autoship order are credit cards and bank drafts.*
-  *Entering information in the **Totals** tab of an autoship template is similar to entering information in the **Totals** tab of an order, while creating a new order.*
-  Click the *Save* button from the tool bar to store the template in the database.

Autoship Edit Report

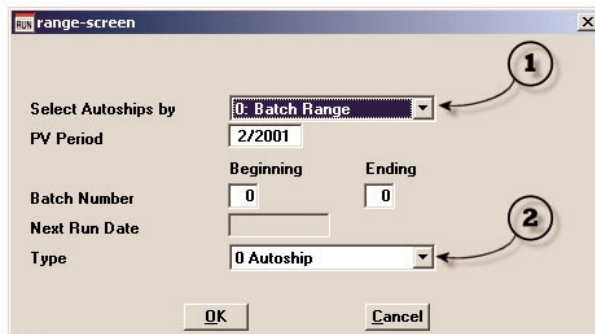

Figure 4.9: Autoship Edit Report (as2510rt) - Selection Criteria.

To run, click the *Tasks* menu, and then click the *Autoship/Bonus Protect* sub-menu, and click *Autoship Edit Report*.

The *Autoship Edit Report* lists all autoship templates that may be generated into orders.

 If a record has already had an order generated for the selected period, then it will not show up on the report.

 For **Bonus Protect**, the report does not check to see if the distributor's volume is such that an order will be generated. It simply lists those distributor's bonus protect records which are eligible to have an order generated.

1 Refer to figure 4.9. From the *Select Autoships by* dropdown box, choose whether to select by batch number or by next run date. If you choose to select by batch number, then enter the beginning and ending batch numbers. Otherwise, if you choose to select by next run date, then enter the date.

2 From the *Type* dropdown box, choose whether you want the report to show *Autoship* templates, or *Bonus Protect* templates.

Click the *Ok* button to process the report. From the *Report Output Selection* window, choose the desired action.

Autoship Edit Report... (as2510rt) Database: *Release 2.0.4* - leroymb

- 7** This is the *Invoice Amount*.
- 8** This is the *Payment Amount*.
- 9** This shows the *Invoice Balance*.
- 10** This shows from which warehouse the stock will be shipped from.

Deleting an Autoship or Bonus Protect

1. Display the *Autoship (Add/Update)* window.
2. Type the autoship number.
3. Press [ENTER] to display the autoship.
4. Click the *Delete* button.
5. Click the Yes button when prompted, "Do you want to delete this transaction?"

Unlike an order, an autoship can be undeleted. Simply enter the new status and save the record.

Generate Autoship Orders by Batch

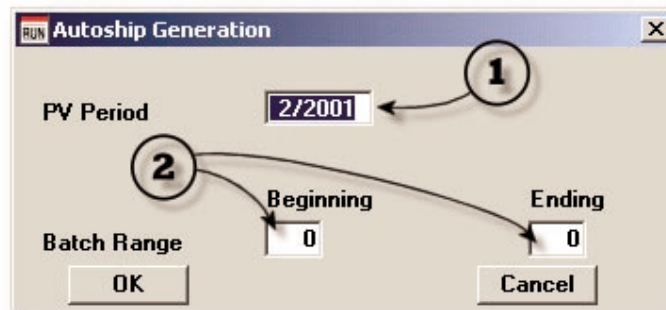

Figure 4.11: Generate AS Orders by Batch (as3512up) - Selection Criteria.

To launch this program, click the *Tasks* menu, and then click the *Autoship/Bonus Protect* sub-menu, and finally click the *Generate AS Orders by Batch*.

All active *Autoship Orders* are generated into orders.

The three primary rules for determining whether to generate an order are:

1. *The autoship record must be active*
2. *The current system date must be between the record's start and end dates*
3. *The records **last run period** must be less than the **entered period**. Without passing these tests, a template will not have an order created.*

Reports will contain notation and comments indicating whether there were problems, or not.

For instance, you will see a notation stating, “Value before recalc =>” that informs the reader that before and after values as a result of the autoship calculation.

- 1 Refer to figure 4.11. Enter the appropriate *PV Period*.

 *The entered PV Period must be active (i.e. in the range of the beginning and ending periods).*

- 2 Enter a beginning and ending *Batch Range*.

 *Only records passing the three primary tests, stated earlier, and whose batch number falls in the range specified in figure 4.11, will be selected.*

Click the *Ok* button to continue.

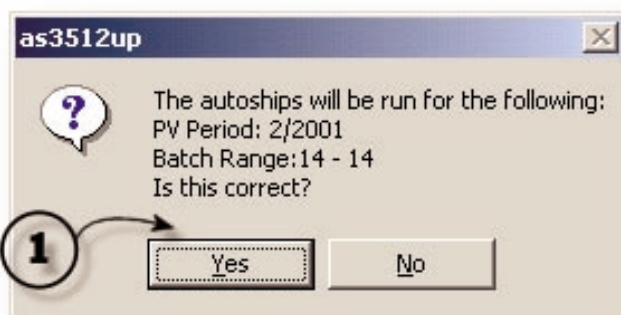

Figure 4.12: Generate AS Orders by Batch (as3512up) - Selection Criteria.

- 1 See figure 4.12. Click *Yes* after you have verified the correct *PV Period* and batch range have been selected.

InfoTrax BackOffice automatically creates a report listing which distributors received Autoship orders.

From the *Report Output Selection* window, choose the desired action.

Figure 4.13: Generate AS Orders by Batch (as3512up).

- 1 Refer to figure 4.13. The selection criteria you entered in figure 4.11 is printed here on the report.
- 2 The *Order Number* produced by the *Autoship* run.
- 3 The *Autoship* template number.
- 4 The *Autoship Batch* number.
- 5 The *Distributor ID* and *Distributor Name*.
- 6 The *PV Period*.

Generate AS Orders by Run Date

Given the process to *Generate AS Orders by Run Date* is so similar to that of generating by batch, we will have you refer to the figures 4.11 through 4.13 while walking through the process. Follow these steps.

1. *Bring up the **Generate AS Orders by Run Date** window by clicking the Tasks menu, and then clicking the Autoship/Bonus Protect sub-menu, and clicking the Generate AS Orders by Run Date.*
2. *Enter the appropriate **PV Period**.*

*The entered **PV Period** must be active (i.e. in the range of the beginning and ending periods.)*

3. *Enter an **Autoship Run Date**.*

If the autoship record is active, and if the current system date is between the record's start and end dates, and the records last run period is less than the entered period, then the program will select those candidates whose next run date matches the entered next run date.

4. *Click the **OK** button.*
5. *Click the **Yes** button after you have verified the correct **PV Period** and next run date have been selected.*
6. *From the **Report Output Selection** window, choose the desired action.*

InfoTrax BackOffice automatically creates a report listing which distributors received autoship orders.

Generate BP Orders by Batch

Because the process to *Generate BP Orders by Batch* is similar to that of generating autoship orders, we will have you refer to figures 4.11 through 4.13 while walking through the process. Follow these steps.

1. *Launch the program by clicking the **Tasks** menu, and then clicking the **Autoship/Bonus Protect** sub-menu, and clicking **Generate BP Orders by Batch**.*
2. *Enter the appropriate **PV Period**.*

*The entered **PV Period** must be active (i.e. in the range of the beginning and ending periods.)*

3. *Enter a beginning and ending **Batch Range**.*

If the autoship record is active, and if the current system date is between the record's start and end dates, and the records last run period is less than the entered period, then the program will select those candidates whose batch number falls within the range specified by the operator.

4. *Click the **OK** button.*

5. Click the **Yes** button after you have verified the correct **PV Period** and batch range have been selected.
6. From the **Report Output Selection** window, choose the desired action.

InfoTrax BackOffice automatically creates a report listing which distributors received **Bonus Protect** orders.

Batch Bank Draft Release

The *Batch Bank Draft Release* task moves those status 1 (*Entered*) orders to status 2 (*Ready to Print*) that are paid for using a bank draft, and have been held for a specified number of days.

The program knows a payment is by bank draft because of the payment type's subroutine name. It will look for those payments whose subroutine name starts with "drf".

There are two standard bank draft subroutines, and the difference between two is the number of days to hold the order. The two subroutines are:

1. **drfpaysb** - holds the order for zero days.
2. **drfpay10sb** - holds the order for 10 days.

Follow these steps to process batch bank draft releases.

1. To run this program, click the *Tasks* menu, and then click *Batch Bank Draft Release*.

2. Click the *OK* button to release all status 1 orders, or use the range selection criteria window to narrow the task to a range of orders.
3. Click the *OK* button to run.

 *The program generates a report listing those orders moved to status 2.*

4. From the *Report Output Selection* window, choose the desired action.

Batch Credit Card Authorization

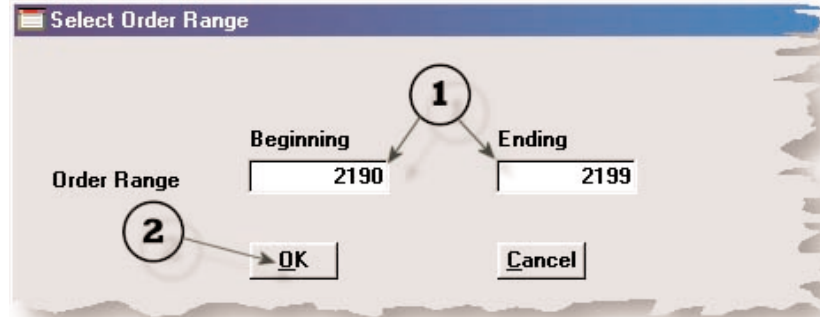

Figure 4.14: *Batch Credit Card Authorization.- Selection Criteria.*

The *Batch CC Authorization* tries to authorize all credit card payments which have not been authorized.

 *The program assumes payment type 3 is credit cards.*

Run the program by clicking the *Tasks* menu, and then clicking *Batch CC Authorization*.

- 1 See figure 4.14. Use the range selection window to limit the task to a range of orders.
- 2 Or you can just click the *OK* button without entering the range to try to authorize all of the orders.

The program generates a report listing all payments processed. It will indicate those credit cards that were authorized. Those that were not authorized are also included on the report along with short description of why the payment was not authorized.

Figure 4.15: Batch Credit Card Authorization.

- 1 The first column shows the *Order Number*.
- 2 In the second column, the *Distributor ID* is displayed on the first line, and the *entry date* is displayed on the second.
- 3 The *Distributor Name* is displayed on the first line of the third column, and the account number is on the second line.

- ④ In the fourth column the *Home Phone* and the payment amount is shown.
- ⑤ The fifth column shows the *Work Phone* and the *Invoice Amount*.
- ⑥ The sixth column gives a brief explanation of why the credit cards weren't authorized.

Conclusion

In this chapter we have explored the procedure for entering orders into InfoTrax BackOffice. This includes entering general information such as the *order type* and where the products will be shipped. We then learned how to enter items on an order. Finally, we examined the orders *total tab* which shows the *total sale*, *total discount*, *total shipping*, and the *invoice total*. We also learned how to record various *payment types* to an order.

The next chapter will discuss the order fulfillment phase - shipments.
